## **Customer Reviews**

Not for the beginner, this book really delivers on the promise of its title. An hour after opening it, I was doing things I'd wanted to do for a long time. Rubenking starts by showing you how to take control of a form's basic appearance -- yes, you can remove the caption and keep the border! He goes onto help you make Delphi's various components behave the way you'd like, and includes information on accessing helpful Windows API functions. Some of the other topics are date math, DLLs, the application object, data-aware controls -- and lots more. Sophisticated topics are explained in comprehensible language. Both the 16- and 32-bit versions are covered. This book can help you reach the next level of Delphi programming in a short time

A full range of techniques and tricks about Delphi and Windows integration. Each technique is presented using a very well focused program, i.e. the minimal piece of clean and elegant Delphi code demonstrating the solution. Even better, the problems and solutions (about 200 of them)

presented in this book are really useful! On the first day we got the book, we found ready made solutions to problems we had discovered but hadn't solved before (or hadn't found time to investigate before). This is one of the rare books we don't share: each Delphi programmer here now has his own copy.

Neil Rubenking's (the author of the immensely popular Delphi Programming For Dummies) book is a treasure trove of helpful techniques that will benefit every Delphi programmer. For example, he has the best "force a single instance of a running program" code example I've seen. The only complaint I have is that the index isn't as good as it could be. Not for beginning Delphi programmers, but even those with moderate Delphi experience will benefit from the eclectic mix of topics covered in this book.

It lack of the real world database application. The most cases I encounter is to manipulate the datas that a company makes. I need to analysis it for the manager to view. Maybe you can add it to the book in your next edition. best regards Alfred Yang from Taiwan
